

VICKY KUMAR

Lead Software Engineer

Bangalore, Karnataka | +91- 9006773422

vicky123kumar22@gmail.com | <https://www.linkedin.com/in/vsevicky> | <https://github.com/donrockvic>

OVERVIEW

Results-driven Lead Software Engineer with **7+ years of experience** architecting and scaling **secure, high-performance backend systems**. Proven expertise in **python/golang, distributed systems, microservices, and cloud-native infrastructure**, with a strong focus on **reliability, low-latency performance, and production-grade security**. Adept at **leading engineering teams**, driving **system performance**, and delivering **clean, testable, and maintainable code**. Passionate about building **resilient platforms** that detect and respond to **sophisticated threats** in real time.

EXPERIENCE

Tech Lead, PocketFM, Bengaluru, India

Feb 2022 - Present

- Architected and scaled backend systems that supported PocketFM growth from **5M to over 20M DAUs**.
- Directed development of *Pocket-TV*, an OTT platform from MVP to production in **under 4 weeks**.
- Engineered a microservices backend to support rapid scale-up from **100 to 5,000 DAUs in 1 month**, ensuring performance and resilience.
- Migrated databases from self-hosted to enterprise infrastructure, reducing infra team effort by **15%**.
- Streamlined database and caching strategies, saving **\$6K/month** in infrastructure costs.
- Transitioned search stack from Elasticsearch to OpenSearch, improving relevance and cutting costs by **\$6K annually**.
- **Localized** the app for international markets (Mexico, Europe), contributing to a **\$10M monthly revenue increase**.
- **Integrated** third-party audiobook platforms (e.g., HarperCollins, Hubhopper), raising show retention by **10–12%**.
- Drove backend initiatives for User-Generated Content (UGC) and oversaw major app design revamp.
- Launched content personalization features that improved user retention and discovery by **20%**, generating **~\$10M annual revenue**.
- **Developed** in-app payment features, contributing to a **10% lift in monetization revenue** and **2% YoY growth**.
- **Reduced API latency by 30%** by implementing static feed pagination and lazy loading mechanisms.
- Created an offline experiment allocation system, enabling rapid A/B launches for **100M+ users**.
- Enhanced push notification delivery (Golang + OneSignal), increasing content discovery by **5%**.
- Built a show marketing automation framework, delivering a **1% monthly revenue uplift**.
- **Shipped over 75 product experiments** to boost engagement, monetization, and scalability, resulting in **\$30M incremental annual revenue (3%)**.
- **Collaborate cross-functionally** with Data Science, GenAI, Infra, Platform, and Product teams to deliver **highly scalable features** with exceptional velocity.
- Built a real-time and batch image processing pipeline using CDN for efficient asset delivery and transformation.
- Mentored junior developers, promoting engineering excellence and a collaborative team environment.

Software Developer, Propel Technology, Remote

March 2021 - Feb 2022

- **Developed 2 microservices** from scratch using Python, Flask, PostgreSQL, Redis, Kubernetes, and Azure.
- Improved API performance by **40%** by introducing **caching strategies** and **database normalization**.
- **Wrote unit tests using Pytest** and deployed services in **Dockerized environments** using **Azure Cloud**.
- Enhanced data consistency and service reliability by **optimizing database queries** and improving microservices interaction.

Software Developer, Wipro, Bengaluru, India

May 2018 - March 2021

- Developed large-scale data pipelines using **IBM Message Queue**, enabling the transfer of **terabytes** of client data.
- Automated report generation and delivery using UNIX Bash, Autosys, and Geneos, reducing manual effort by **30%**.
- Built RESTful APIs using Python and SOAP UI, enabling real-time **automated report delivery** to clients, saving the team **20%** of manual effort.
- Increased operational efficiency by reducing manual report generation and improving data processing throughput.

EDUCATION

Bhagalpur College of Engineering **B.Tech in Computer Science**

2014-2018

GPA: 77.8% | Coursework: Computer Architecture, Computational Theory, Learning Algorithms

Major Project: Smart waste Management system with IoT

SKILLS

- **Languages:** Python, Golang, SQL, Java
- **Frameworks:** Gin, Django, Flask
- **Databases:** MySQL, Redis, Cassandra, Scylla, MongoDB
- **Development Practices:** Agile, TDD, OOP, Microservices
- **Technologies:** Kafka, Kubernetes, Docker, AWS, OpenSearch
- **Tools:** Git, Redis Cluster, Elasticsearch, OneSignal, Pytest, OpenAPI

CERTIFICATES

Udemy - Shell Scripting in UNIX

Udemy- Python for Algorithm design

Udemy- Python for Data Science and ML
